Subject: Re: March planning board meeting

These are the notes I had from the last meeting that the board was looking for information on

Look into planting trees closer to road and staggered so as to block view of building

(now shown on updated drawings)

Dumpster location and screening

(now shown on updated drawings)

Show availability for more parking if needed (current plan ides meet spec)

(now shown on updated drawings)

Is there a catch basin located on property ?

(I looked and I do not see any catch basin located on the property)

If utilities are getting placed on roof, please show them and screening

(Utilities will not be placed on the roof)

Information on existing sewer pump set up and capacity

(Submitted with new drawings)

Look into adding decorative trim to front of building and windows

(I met with our Constrution team. Carpentry, mason, architect, engineer and there is no easy and or cost effective way to add decorative trim to the front of the building due to the current building design and construction materials)

Windows all have existing stone sills top, bottom and steel lentils above them.
